#### ERD - 테이블 관계(식별,비식별)

행이™ │ 2016.06.08 15:06

간혹 헛갈리는 경우가 있지만 내용은 간단하다.

- 1. 부모 테이블의 PK가 자식 테이블에서도 PK로 쓰였느냐 그렇지 않느냐.
- 2. 부모 테이블과 자식 테이블이 1:1 이냐 1:N 이냐.
  - ☞ 부모 테이블에 DATA가 1개 있는 경우 자식 테이블에 DATA가 몇 개 있느냐를 따지는 것.

부모 테이블의 PK가 자식 테이블에서도 PK로 쓰였다면?

식별관계 → 직선으로 표시

부모 테이블의 PK가 자식 테이블에 있기는 하지만 PK로 쓰이지 않았다면?

비식별관계 → 점선으로 표시

테이블의 관계가 1인 경우 ₩ 테이블의 관계가 1~N개인 경우 ₩

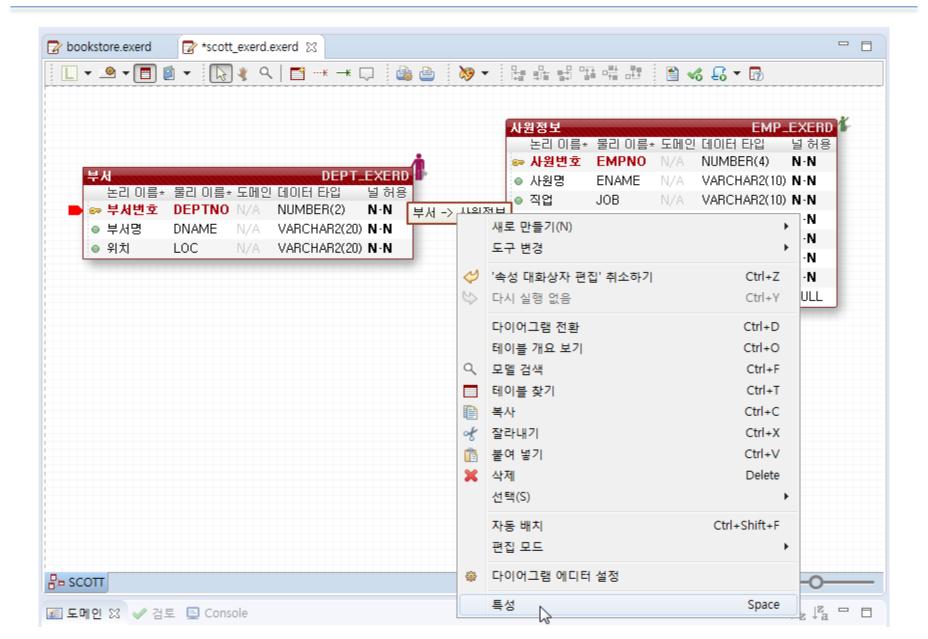

여기에 0개일 경우가 존재한다면 위의 선 모양들에 동그라미(O)만 쳐주면 끝.

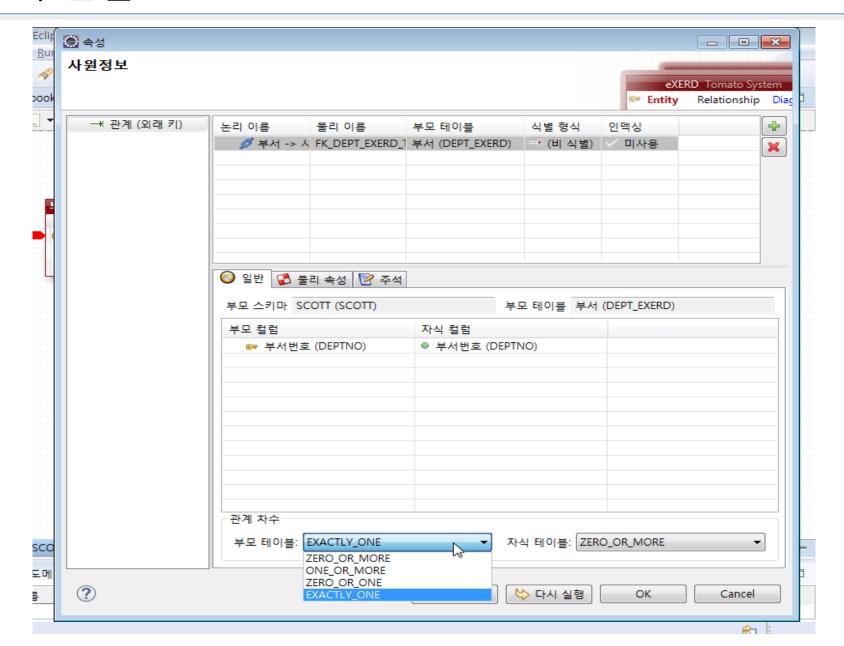

테이블의 관계가 0이거나 1인 경우 **♡**► 테이블의 관계가 0~N개인 경우 **○**<

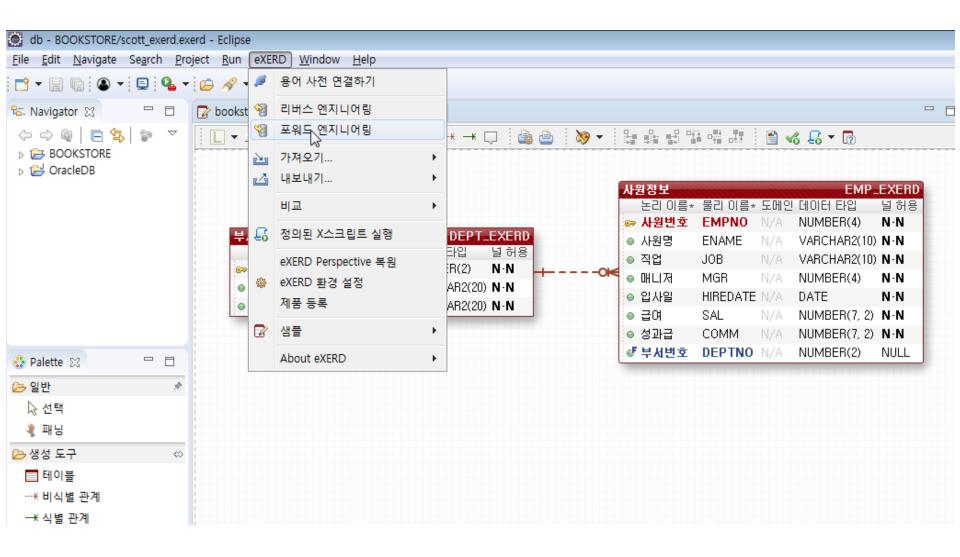

뭔가 많이 복잡스러워 보이는 것 같지만 이게 다다.

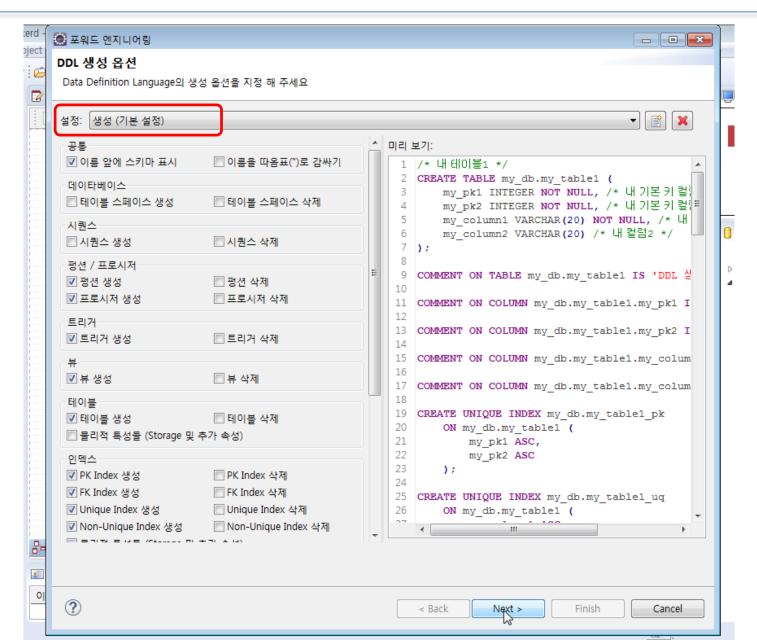

직선인지 점선인지 십자가(!)인지, 나무목처럼 다리가 있는지 거기에 동그라미가 있는지

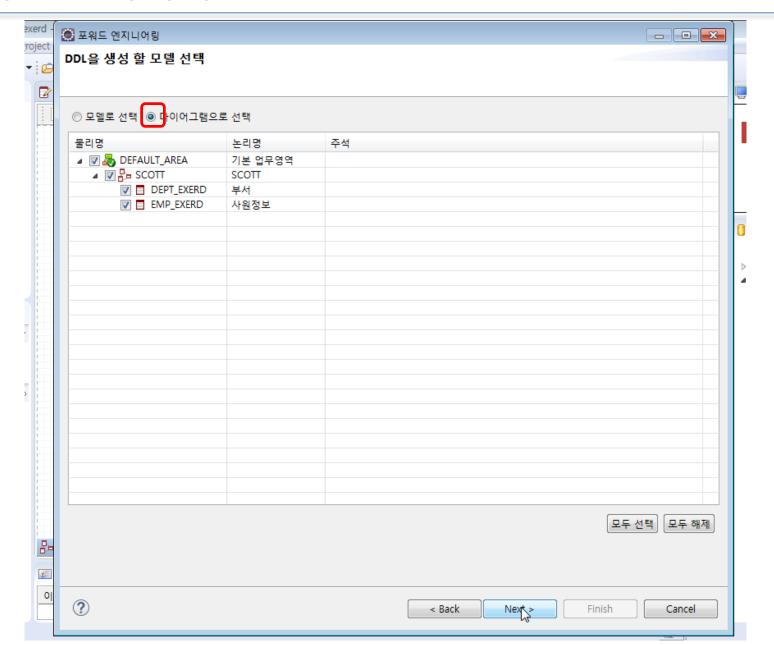

이제 남은 건 테이블들의 관계를 정확하게 따져 본 다음 ERD를 슥슥삭삭 그리는 것 뿐이다.
